Completed on	Monday, 28 September 2026, 8:03 PM
Time taken	3 hours 52 mins
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than `⌊n / 2⌋` times. You may assume that the majority element always exists in the array.

Example 1:

```
Input: nums = [3,2,3]
Output: 3
```

Example 2:

```
Input: nums = [2,2,1,1,1,2,2]
Output: 2
```

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 10^4`
- `-2^31 <= nums[i] <= 2^31 - 1`

For example:

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main()
{
    int n;
    int i, j, count;

    scanf("%d", &n);

    int nums[n];

    for (i = 0; i < n; i++)
    {
        scanf("%d", &nums[i]);
    }

    for (i = 0; i < n; i++)
    {
        count = 0;

        for (j = 0; j < n; j++)
        {
            if (nums[i] == nums[j])
            {
                count++;
            }
        }

        if (count > n / 2)
        {
            printf("%d", nums[i]);
            break;
        }
```

```
35      }
36
37      return 0;
38  }
```

	Input	Expected	Got	
✔	3 3 2 3	3	3	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
